PTFE sensor protection, white

code: F5300

Teflon (PTFE) sensor cover (white color), with increased resistance against splashing water, non-absorbent surface. Filtering ability 25µm. Temperature range -40°C to +125°C.
Example of use: indoor plants require regular washing of installed equipment or washing of walls.
Cover is not suitable for outdoor use and for applications with risk of condensation (high humidity environment with temperature changes). It is also not suitable for applications requiring fast response to changes in temperature and / or humidity.
