COMET Cloud

code: cloud

COMET Cloud is the internet storage of data measured by

Measured values are sent via Wireless Dataloggers with GSM modem or IoT Sensors powered by Sigfox (Internet of Things) in adjustable time interval from 10 minutes to 24 hours.

Every user has the access to his account COMET Cloud, protected by password.

COMET Cloud enables to add sensors, create organizational structures, sensor groups and user groups. For each user different rights can be set for display and administration
