

## FU input module for logger MS

code: M1047

Input for measurement of frequency of voltage signal 0 to 5kHz, resolution 1Hz, accuracy  $\pm(0.2\% \text{ from reading} + 1\text{Hz})$  input voltage for state "H": 3 to 24Vdc input current in state "H": approximately 7mA minimum duration of input impuls: 30us, galvanic isolated.

### Technical data
